

AMENDMENTS TO THE SPECIFICATION

Amend paragraph 22 on page 5 as follows:

[0022] Water pump 26 is a ~~variable-speed~~ controllable flow water pump designed to provide adequate coolant flow at idle as well as at maximum engine loads over the engine speed range. Pump 26 is preferably a variable speed electric water pump but could also be mechanically driven. Alternatively, the pump could use variable pitch vanes or an engine bypass line to vary coolant flow through the engine.
